

CTBA, an inter-professional establishment, was established in 1952 at the demand of professionals in accordance with the law of 1948 that instituted the Industrial Technical Centres.

The business of CTBA covers all timber and furnishing industries, supported by various lines of business:

- collective: Studies and Research, standardisation, information, etc.*
- private: technical assistance, certification, tests, training, etc.*

Wood Biology and Wood Preservation Research Scientist (M/W) **Permanent contract**

Tasks

Within the Timber Construction Industries Division, in relation with the Biology laboratory (entomology, mycology, ecotoxicology) and in collaboration with the other services of CTBA, you will work at a national and international level, in relation with the wood and preservation professional and industrial sectors, as well as the research centres and universities.

Assignments

- Developing research projects in French and / or in English in reply to national and international application calls,
- Searching industrial and university partners,
- Managing and coordinating the research studies in your activity's field,
- Writing the studies' reports,
- Making written communications (publications) and presentations (symposiums),
- Making the technology watch in your activity's field and detecting the industrial needs. Having creative skills and contributing to the technologies transfers development.

Activities' fields

- Biology applied to the wood preservation (Entomology, mycology, ecotoxicology),
- Wood preservation (Biocidal chemistry, treatment process, improvement of the wood natural durability,...),
- New technologies of detection and identification (biochips, electronic noses...).

Job definition and Experience

You have a master in the fields detailed above or you have a diploma of agricultural engineer or of an equivalent engineer school . You have completed your training by a PHD in one of the fields concerning the wood and / or its preservation or its durability.

You have 2 to 5 years of experience in the concerned industrial sectors.

You are fluent in English, and if you come from a foreign country, you must have a practice of the French language which allows you to carry out your missions.

You also have good aptitudes for the trade development, the communication and the teamwork, in particular within a laboratory. You are self-working and have abilities for analysis and synthesis.

For this Rolling contract located in Bordeaux, thank you to sent your CV and your application letter under the reference 2006IBC25 to :
